H1 Work In Progress h^-

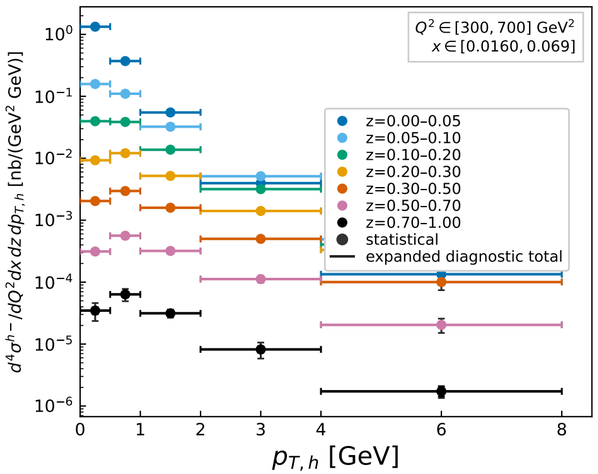

L=351 pb^{-1} PROVISIONAL INTERNAL DIAGNOSTIC raw/no background subtraction

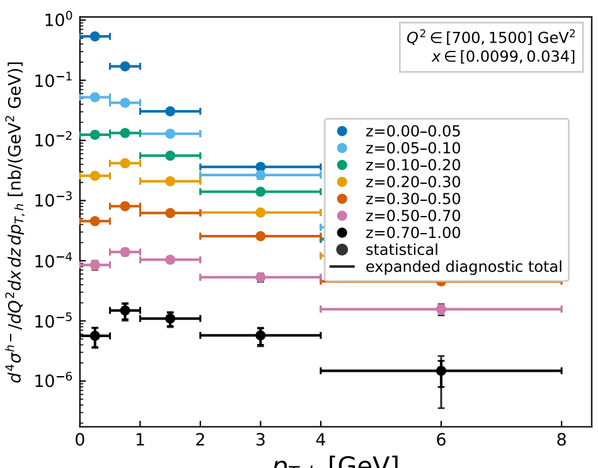

HISTORICAL Bprime lowQ2-only sidecar proxy; δ_BG = 0.5 B/Y (linearized); no subtraction, shifted-response, or unfolding propagation; expanded diagnostic total is NOT final total and plots are NOT final central values; no C_rad; not Born-level; canonical |η_h|<1.6; eta-cut variation excluded.

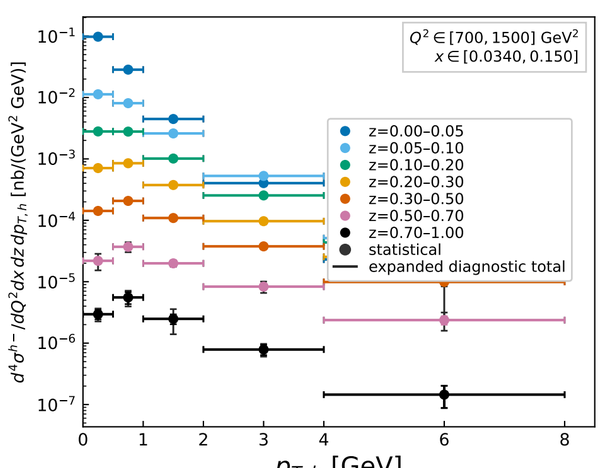

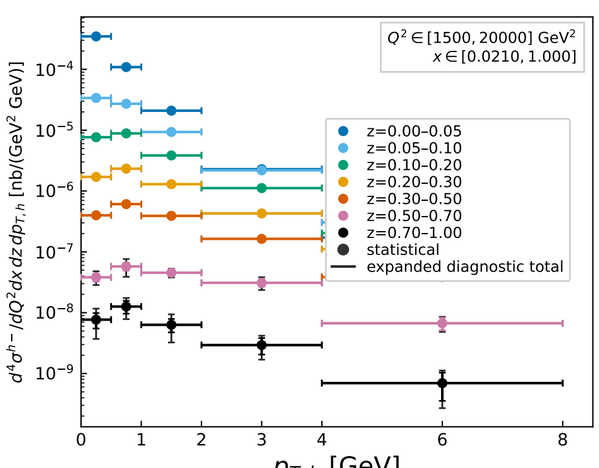

Markers/error bars: statistical uncertainty. Black error bars: expanded diagnostic total (not final total).

h− bin_index 34: SENSITIVITY-ONLY (B>Y; symmetric uncertainty is non-Gaussian, not conventional).
